WORK EXPERIENCE

1. FrontEnd Developer, LEARNYST   Mar 2023 – Present

Learnyst provides Branded Online Teaching Apps to sell courses & mock tests. On Learnyst educators have launched 5000+ courses with course sales of 4 million dollars and more than 80,000 students are using Learnyst branded apps.

- Worked on learner profile data, which included payment details, course access, and learner enrollments.
- Admin has the ability to change learner information. Adding a new course to a learner's profile, as well as resetting and removing access to a specific course
- Tech Stack: React, TypeScript, GraphQL, Amazon AWS, Redux-Bundler, Theme-UI.

2. FrontEnd Developer, AT&T API Marketplace   Mar 2022 - Mar 2023

AT&T API Marketplace is one of the largest telecommunications operators in the United States.

- Integrated three different forms into one to cut down on the number of API requests which were previously being made, and also rebuilt to a new design.
- Migrated all website text content to a new file and arranged it according to Page routes.
- For a better user experience, toast notifications were included for success and error responses across various pages.
- Worked on resolving UI bugs and design modifications across various devices.
- Tech Stack: JavaScript, NextJS, GraphQL.

PROJECTS

1. ToDo Application using Redux | App Link | Github Link

- A simple to-do app with options such as displaying all tasks, active tasks, completed tasks, and the number of pending tasks.
- Tech Stack: NextJS, Redux.

2. Github Finder | App Link | Github Link

- This GitHub finder uses GITHUB's API. Users can find GitHub users and view their repos.
- Tech Stack: ReactJS, TailWinds CSS.
